

Compliance with Directive 2011/65/EU (“RoHS”)

5 March 2024 | Page 1 of 1

Dear Sir or Madam,

From time to time, our customers ask us to comment on our compliance with certain topics.

Directive 2011/65/EU of 8 June 2011 (“RoHS Directive”) on the restriction of the use of certain hazardous substances in electrical and electronic equipment lays down rules on the restriction of the use of hazardous substances in electrical and electronic equipment (EEE) with a view to contributing to the protection of human health and the environment, including the environmentally sound recovery and disposal of waste EEE.

According to the Directive, EEE is defined as equipment which is dependent on electric currents or electromagnetic fields in order to work properly and equipment for the generation, transfer and measurement of such currents and fields and designed for use with a voltage rating not exceeding 1 000 volts for alternating current and 1 500 volts for direct current. Annex I lists the categories of EEE covered by the Directive.

We are aware of the obligations under the RoHS Directive and the resulting national legal requirements that apply to us and fulfill these obligations completely. As a manufacturer of measurement and control technology, we are a so-called “economic operator”. All devices manufactured by us comply with the RoHS Directive.

If you have any further questions, please do not hesitate to contact our [sales department](#):
